## What is PECOS?

PECOS (**Provider Enrollment, Chain, and Ownership System**) supports the Medicare provider and supplier enrollment process by capturing provider/supplier information from the CMS-855 family of forms. The system manages, tracks, and validates enrollment data collected in both paper form and electronically via the Internet.

This website allows registered users to securely and electronically manage **Medicare enrollment information**. Registered users may:

- Submit an enrollment application to Medicare.
- View or update existing enrollment information.
- View the status of applications submitted to Medicare from this website.
- Voluntarily withdraw enrollment in Medicare

PECOS does not “interface” with any EHR system. It is a separate Medicare system dealing with CMS-855 enrollment forms and management of Medicare enrollment information. **HOWEVER** – Medicare participants are independently required to obtain their PECOS identification number.
